

7 reasons body worn solutions are right for retail

Discover all the ways Axis body worn cameras can help you keep staff safe, support loss prevention, and ensure compliance — all in a sleek, lightweight solution that's easy to use and comfortable to wear.

1

Be where your staff is

When situations get tense, visible cameras communicate that staff isn't alone. Customers keep a cooler head, and team members are more likely to follow protocols.

2

Keep it on the record

Catch human error and protect against false claims with easy first-person documentation of processes, from curbside pickup loading to stock management.

3

See more

When staff activate a body worn camera, a camera-to-camera activation signal is sent. That signal triggers other nearby wearables to record as well – capturing multiple perspectives on an incident.

4

Clip and go

With an easy-to-use, fabric-safe magnetic fastener, getting the camera on is fast and easy. Need more mounting options? A Klick Fast-ready backing is also available.

5

Easy does it

A simple, user-friendly design lets you activate recording with a single touch – and the camera also supports one-touch live streaming.

6

Works well with others

Axis body worn cameras work or integrate with any major VMS. We build on open standards so that you have flexibility.

7

Tech you can count on

Our body worn cameras are part of a long tradition of outstanding quality, reliability, and support from the leader in network video surveillance.
